

survive & thrive

LEAN Construction Awareness

WHY should companies settle to survive, when a few simple changes could enable them to thrive?

NFB Training believes the quickest and most effective way to ensure that companies do not simply survive the challenges of today, but learn to thrive in an increasingly competitive market, is to create processes within the organisation that focus on a 'more for less' philosophy.

ARE these business objectives proving a challenge?

- Profitability
- Improve efficiency
- Gain a competitive edge
- Improve tender application hit rates
- Meet or exceed environmental targets
- Achieve sustainable business growth

WOULD you like to turn them in a reality?

NFB Training is holding a series of half-day Lean Construction Awareness taster sessions which will introduce delegates to the concept and practice of Lean Construction and offer an introduction to the larger LEAN Initiative being delivered by us in 2011.

WHAT is LEAN Construction?

The principle of Lean construction focuses on companies putting into place processes which minimise the waste of materials, time, and effort in order to generate the maximum possible amount of value and advantage.

WHAT will we gain from attending the workshop?

These Introductory workshops will bring an understanding of Lean practices to companies working within the construction industry. Each will focus on a different area of specialism.

Colchester	Care Homes/Health	18th May
Northampton	Social Housing	19th May
Newmarket	Education/Schools	26th May

9am—2pm (lunch provided)

To book the workshop that best suits your needs please complete the booking form on the reverse.

Workshop cost
£32.50 + VAT

Full LEAN Initiative

NFB Training have successfully achieved funding from ConstructionSkills to deliver this Initiative which looks to deliver quality, costs and improvement across whole projects.

Up to 6 companies can benefit from this initiative which will deliver up to **10-15 days** training over a period of 6-9 months and which offers significant benefits:

- ✓ A £4m project undertaken by Stepnells Ltd to which Lean principles were applied achieved the following outcomes:
 - 80% reduced rework
 - 30% savings on site visits
 - 88% planned activities achieved
- ✓ In another example, a company anchored the lean principles to a project and achieved:
 - 75% reduction in abortive calls
 - 15 additional jobs completed per week

The cost of this project would normally be around **£12,000**.

NFB member price (Inclusive of funding)
£1,750 + VAT

Leverage more profit
